

ATLANTIK JASHARI

Software Engineer

- Detail-oriented Software Engineer with 3+ years of experience building scalable, maintainable, and high-performance web applications. Proficient in TypeScript, React/Next.js, Vue/Nuxt and GraphQL, with hands-on backend experience in Django, Django REST Framework, NestJS and Hasura. A team player who bridges front-end and back-end efficiently while keeping UX/UI at the center of development. Strong focus on clean code, performance optimization, mentoring, and continuous improvement.

RELEVANT SKILLS

- React
- Nextjs
- Vue / Nuxt
- Typescript
- GraphQL
- Rest API
- Django / DRF
- NestJS

WORK EXPERIENCE

• AnchorzUp | Frontend Developer

March 2026 - Present

Building scalable, SSR-first applications with Vue.js, Nuxt, and TypeScript, using the Composition API, custom composables, and Pinia for type-safe, predictable state management. I'm developing an internal all-in-one HR platform for companies that combines gamified tasks, trainings, time attendance, and task evaluation. I also work on the client project Learniverse (learniverse.world and app.learniverse.world) and mentor new employees joining the team.

• Analytik | Frontend Developer

June 2025 - February 2026

Built scalable and intuitive web apps using React, TypeScript, and Refine.dev, with UI libraries like MUI and Ant Design. For a high-end client, I built a budgeting and forecasting application with full-year graphs and interactive dashboards that turn complex data into clear decisions. I structured projects using Atomic Design, implemented role-based access controls, and enhanced UX with filtering, sorting, and drag-and-drop, with a strong focus on clean, maintainable, and reusable code.

• Pabau Clinic Software - Software Engineer

April 2024 - April 2025

At Pabau (pabau.com), I was part of the team building a B2B CRM used by multiple clinics to run their daily operations. I worked across the whole stack: React (Next.js) and TypeScript on the front end, GraphQL with Hasura and NestJS resolvers on the back end, and Jest for testing. I led front-end development efforts that made complex tasks feel simple for healthcare professionals, took initiative in refining architectural decisions, and mentored newer developers.

- **myBranda (mybranda.com) - Full Stack Developer**

July 2023 - June 2024

I joined myBranda to help scale their core product. While my primary focus was building sleek, responsive front-end components in React, I often jumped into the backend (Django) to resolve bottlenecks or collaborate closely on full-stack features. I wasn't just coding—I was involved in product discussions, UX improvements, and shipping meaningful updates that users noticed.

- **Eventkickoff (eventkickoff.com)**

August 2023 - July 2024

I worked on making event planning smoother and more engaging. Using Laravel, I revamped the user flow for event creation and registration, making it simpler and more inviting. Beyond that, I introduced new features that expanded the platform's reach—supporting a wider variety of event types and improving user retention. My work helped turn Eventkickoff from a basic tool into a community-driven experience.

- **Aralytiks | React Developer**

November 2022 - July 2023

At Aralytiks, I helped build powerful data applications that teams actually wanted to use. I specialized in developing custom React components while also working in Power Apps to deliver data tools tailored to real business needs. I created several SharePoint webparts using SPFx that became essential to clients. It was here that I learned how to turn raw data and complex logic into beautiful, usable products—and built the foundation for my current expertise.

EDUCATION HISTORY

Computer Science and Engineering

Institution: UBT 2019 - 2023

CERTIFICATIONS

Python Advanced

Institution: Innovation Centre Kosovo
2021

Python Programming

Institution: Innovation Centre Kosovo
2020

Advanced Django: Mastering Django and Django Rest Framework

Institution: Coursera (Codio)

October 2026

coursera.org/specializations/

[codio-advanced-django-and-django-rest-framework](#)

4-course specialization: building a blog with Django, Django REST Framework, advanced DRF with testing and React integration, external APIs and task queuing with Celery/Redis.
